

# KeyStone Implementation Success

Probably the biggest challenge with any programme or initiative is getting it to “stick”.

Most of us, at some time, have been part of programmes where we have invested money and resource, which after time have just drifted away.

There are many reasons for this, the lack of a structured implementation plan, lack of accountability, lack of leadership execution.....the list goes on!

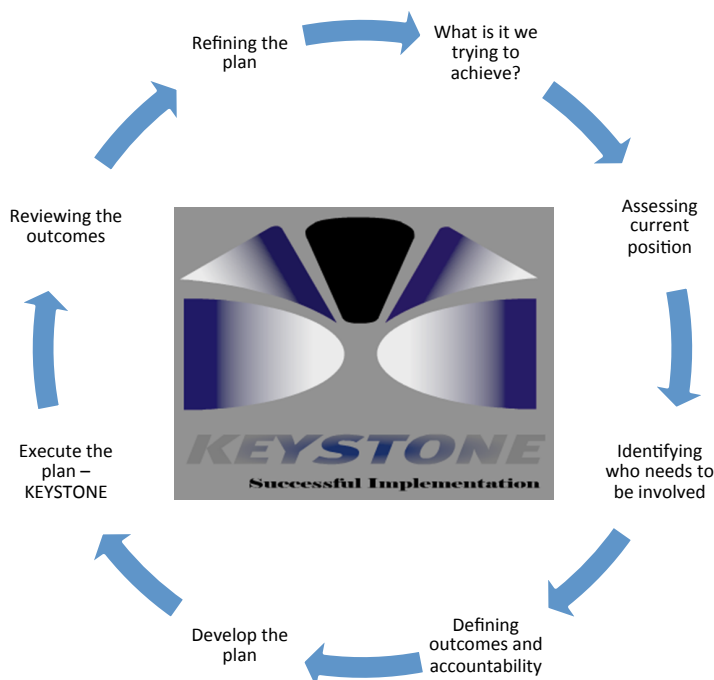

Keystone is a comprehensive framework for driving the successful implementation, adoption and behavioural change of key programmes and transformations projects.

These workshops starts by helping our clients understand what has and what has not worked in previous programmes.

From this learning, we identify what needs to happen to make current programmes work, who the **stakeholders** are and who is **accountable** for what.

Through a series of tailored workshops, the plan is developed, validated and refined, key milestones and success factors defined along with a detailed execution plan.

Outcomes against assigned actions are reviewed and a continuous action plan put in place.

Contact us today to find out how we can help you drive implementation and adoption
